Report on current update patterns

Anthony Davidson

Overview

This report captures the . . .

"New" Exposure sites per update August

Worse suburbs

We can take a dynamic snapshot of the hot spots by taking this curated dataset and running the following analysis:

```
for(i in 1:length(allfiles)){
```

```
  dd <- allfiledat[[i]]
  tt <- table(dd$Contact)

  if (length(tt)>10) {
  for (ii in 1:length(tt))
    {
    res[cc, 1] <- i
    res[cc,2] <- (substr(dd$Date[i], 1,10))
    res[cc,3] <- nrow(dd)
    res[cc,4] <- names(tt)[ii]
    res[cc,5] <- tt[ii]
    cc <- cc+1
    }
  }
}

glimpse(allfiledat)
# allfiledat

res1 <- filter(res,  nsites > 10)
```
"New" Exposure sites for Dickson

"New" Exposure sites for Gungahlin
